

Bulletin Number: DC_IB_0036	Distribution Date: 03/08/21	Effective Date: 03/15/2021
Contact Point: Metrc® Support	Subject: New Features in Metrc	
Reason: Metrc is providing an update on our upcoming feature release along with an update to the Metrc logo		

Greetings Metrc Users,

Metrc is pleased to provide information on our newest enhancements and updates within the software.

1. Users with plant permissions will now have the ability to take update harvest batch names.
2. Users can now view recorded remediation methods and steps under the package history when drilling down on packages.
3. There is a new addition to the canned sales reports related to the sales data optimization to enable finalized sales receipts and completed sales deliveries inclusion in the reports.
4. Optional Item Ingredients field for internal use purposes. The previously used "Ingredients" field will now be "Public Ingredients" and that functionality will remain the same.
5. The Metrc logo has been updated to match the updated branding of Metrc LLC.
6. The Metrc General User Manual has been updated to revision 10.3
7. The Metrc CSV Formatting Guide has been updated to revision 11.1

Please find on the following pages a detailed description of the enhancements:

New Feature: Renaming Harvest Batches

When a user creates a harvest batch, they will add a harvest batch name. If there is a mistake made in assigning a harvest batch name during the harvest batch creation process, users can now select the harvest batch in need of correction and use the new “Rename” button to perform a corrective action. These steps are demonstrated below in **Figure 1** and **Figure 2**.

Please note: The rename functionality is only available before any waste or package weight is recorded.

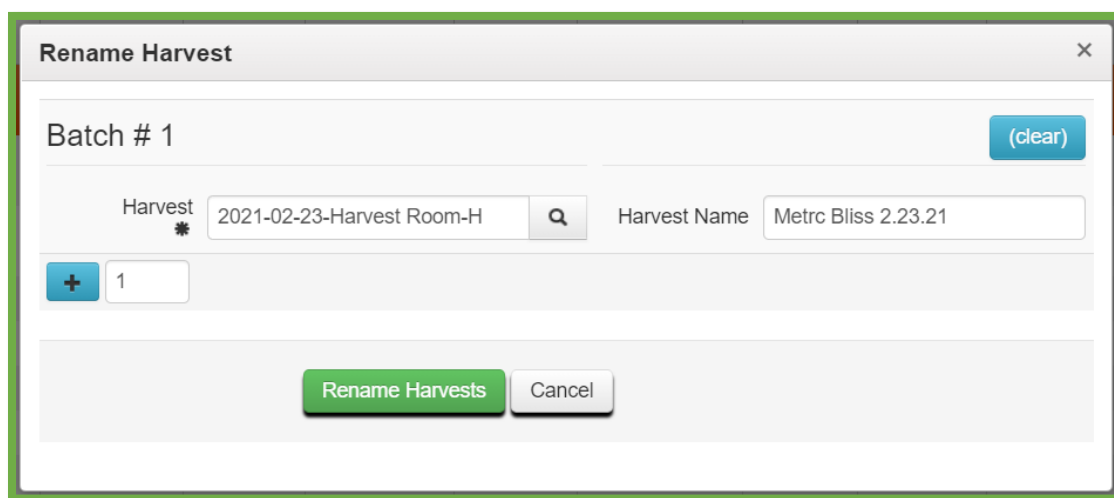

Figure 2: Rename Harvest Batch

Sales Reports: Include Finalized Sales

Included in this update is the ability to toggle the inclusion of finalized sales receipts and completed sales deliveries in canned sales reports. This update is related to the previously released sales data optimization and will allow users to run reports that includes all sales.

This checkbox will appear when running both the Sales Transaction and Monthly Sales reports. If the user wants to include all sales for a given time period and include both active and inactive receipts, they must ensure the box for this option is checked.

An example of this is shown below in **Figure 3**.

Figure 3: Sales Transaction Report with Finalized Sales Enabled

New Feature: Optional Item Ingredients Field

Users will now notice that there is the ability to add item ingredients when adding or editing an item. This feature will not replace the required ingredients for items (this field is now named “Public Ingredients”). The optional ingredients added will only be visible within the current license.

To add a non-public ingredient, the user would use the  button for ingredients. This can be seen below in **Figure 4**.

The screenshot shows the 'Add Items' window with the following fields and controls:

- Item # 1** (with a (clear) button)
- Name** (text input)
- Unit of Measure** (dropdown menu, currently showing '- Select -')
- Category** (dropdown menu, currently showing 'Topicals')
- Admin. Method** (text input)
- U. CBD Percent** (text input with a % symbol)
- U. CBD Content** (text input with 'ex. 100.23' and a dropdown menu showing '- Select -')
- U. THC Content** (text input with 'ex. 100.23' and a dropdown menu showing '- Select -')
- Unit Volume** (text input with 'ex. 100.23' and a dropdown menu showing '- Select -')
- Serving Size** (text input)
- Number of Doses** (text input)
- Public Ingredients** (text area with a placeholder 'List of Public Ingredients...')
- Item Ingredient** (text input with a plus button)
- Item Ingredient # 1** (list of ingredients, currently showing '1 (ingredient)')
- Item Ingredient # 2** (list of ingredients, currently showing '1 (item)')

At the bottom, there is a blue informational box with the text: "Why is there no multi-Facility create such as that available in Employees, Strains, and Locations? Certain Item Categories require the selection of a pre-existing Strain. Verifying and informing that the specified Strain exists in all of the selected Facilities would be convoluted and complex to inform. For this reason we have opted to not add the ability to create Items in multiple Facilities at the same time." Below this box are two buttons: 'Create Items' and 'Cancel'.

Additional Information: Remediation Method

Users will now be able to see the remediation method and remediation steps taken on a package. This information will be accessible under the package history that can be reached by drilling down on any package. An example of this can be seen in **Figure 5** below.
